NAME : Mansi Dwivedi
BRANCH : IT
UID : 2019140016
BATCH : B
COURSE : Data Analytics Lab
EXPERIMENT : 7

AIM : To perform time series analysis: identifying the nature of the phenomenon represented by the sequence of observations, and forecasting

PROBLEM STATEMENT :
This experiment serves as an introduction to exploring and visualizing time series data and covers:

1. Create time series data.
    - Replication requirements: What you'll need to reproduce the analysis
    - Creating time series objects: Convert your data to a time series object for time series analysis.
2. Accommodate trend, as well as seasonal and event-related variation, in time series models.
    - Time series plots: Basic visualization of its objects and differentiating trends, seasonality, and cycle variation.
    - Seasonal plots: Plotting seasonality trends in time series data.
3. Stationary and Autocorrelation of time series: Computing constant mean and variance and visualizing autocorrelation.
4. White noise: Differentiating signal from the noise. (Currently Following steps are not to be done)
5. Diagnose, fit, and interpret exponential smoothing models, ARMA models
6. Identify relative strengths and weaknesses of the above model types.

CODE & OUTPUT:
https://colab.research.google.com/drive/1cJsll4YAyAEsl9hdf0Y0e_-IBw7AHarr?usp=sharing

CONCLUSION :
All the explanations and inferences have been precisely written in the Google Collab Notebook itself.
